Ho Huynh Nhu

Quality Supervision Officer

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year Information Technology student seeking a Quality Supervision position. Experienced in building AI-based vehicle recognition and monitoring systems with IoT sensors, tracking data in real time, detecting anomalies, and preparing reports. Meticulous, responsible, and disciplined in following assignments, with a strong wish to apply technology to improve service quality and compliance with company procedures.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: 3.4 / 4.0
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Featured Projects

VehicleScan – Smart Vehicle Recognition & Monitoring System

Python | YOLO | CNN | Siamese Network | ESP32 | Kafka | PostgreSQL | Firebase

08/2025 – 01/2026

- Built an AI-based vehicle recognition system combined with IoT sensors (ESP32) to manage and monitor parking in real time.
- Prepared and labeled image datasets for vehicle detection, classification, and recognition tasks.
- Trained and evaluated YOLO, CNN, and Siamese Network models to detect, recognize, and identify vehicles.
- Applied image preprocessing and feature extraction to improve recognition accuracy under real-world image conditions.
- Designed data processing workflows for vehicle and IoT sensor data with Kafka, storing and managing data in PostgreSQL and Firebase.
- Integrated data from AI models, sensors, and the application into one unified system to track operating status and support timely decisions.
- Achieved **Second Prize – AI Track** at the UTH Student Scientific Research Conference 2025.
- GitHub: VehicleScanner

Fall Detection – Video-Based Monitoring & Fall Detection System

Python | PyTorch | YOLOv8 Pose | MediaPipe | Transformer

04/2026 – 06/2026

- Extracted human pose features from video using MediaPipe and YOLOv8 Pose to detect fall incidents.
- Trained a Transformer Encoder model, achieving 97.8% mean accuracy with 5-fold cross-validation and testing on unseen data.

Technical Skills

Camera / AI Monitoring	Object detection and recognition from images/video (YOLO, CNN, Siamese Network, MediaPipe), Image Preprocessing, Model Evaluation
IoT & Real-time Monitoring	ESP32, Kafka, RabbitMQ, Firebase, Real-time Data Tracking, Anomaly Detection
Data & Reporting	Python, SQL, PostgreSQL, Power BI, Excel, Operational Reporting, KPI Analysis
Automation	ETL/ELT, dbt, Apache Airflow, Docker

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Processed, checked, and standardized Odoo business data to detect inconsistencies and prepare accurate datasets for reporting.
- Monitored hourly ETL workflows on Airflow, detecting and resolving failures promptly to keep the system stable.
- Built Power BI dashboards to monitor operational metrics and prepared regular reports.

Additional Information

Soft Skills	Following assignments | Meticulous and responsible | Teamwork | Timely reporting | Problem-solving
English	Technical document reading and basic professional communication
Availability	Available for full-time opportunities.
