Ho Huynh Nhu

AI & Agentic AI

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year Information Technology student with a strong interest in Generative AI and Agentic AI, and hands-on experience in LLMs, RAG, Python, SQL, machine learning, deep learning, APIs, workflow automation, and BI dashboards. Experienced in building and evaluating AI models and connecting them with databases and applications. Seeking an AI position with a "build and experiment" mindset to create AI assistants and automation that save time and support business and sales teams.

Education

University of Transport Ho Chi Minh City (UTH) 10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: 3.4 / 4.0
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

Generative AI	LLMs, Retrieval-Augmented Generation (RAG)
AI / Machine Learning	Python, Scikit-learn, EDA, Feature Engineering, Classification, Regression, Random Forest, Model Evaluation, Cross-Validation
Deep Learning	PyTorch, CNN, Siamese Network, Transformer, YOLO, MediaPipe
APIs & Automation	FastAPI, RESTful API, Apache Airflow (workflow automation), RabbitMQ, Power Apps, SharePoint
Data Engineering	ETL/ELT, Data Pipeline, dbt, Data Lake, Data Warehouse, Pandas, NumPy
SQL / Database	SQL, PostgreSQL, SQL Server, MongoDB, Firebase, Supabase
Data Visualization	Power BI, Metabase, DAX, Matplotlib, Seaborn
Programming & Tools	Python, SQL, TypeScript, JavaScript, Kotlin, Git, Docker, Postman, VS Code

Work Experience

Gotik Consulting – Data Engineer Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Automated hourly ETL workflows with Airflow, replacing manual data handling and keeping business data up to date.
- Built Python data pipelines and dbt models on PostgreSQL to transform Odoo data into structured datasets for analytics.
- Developed Power BI dashboards for KPI monitoring and reporting, turning operational data into business insights.

Featured AI Projects

Fall Detection – AI Classification System Python | PyTorch | YOLOv8 Pose | MediaPipe | Transformer

04/2026 – 06/2026

- Prepared video datasets and extracted human pose features using MediaPipe and YOLOv8 Pose for fall/non-fall classification.
- Developed and trained a Transformer Encoder on sequential pose features; achieved 97.8% mean accuracy with 5-fold cross-validation and tested on unseen data.
- Integrated the model into a full system with backend, desktop, and mobile applications.

VehicleScan – AI-Based Vehicle Recognition System Python | YOLO | CNN | Siamese Network | Firebase

03/2025 – 03/2026

- Prepared and labeled datasets for vehicle detection, classification, and recognition tasks.
- Trained and evaluated YOLO, CNN, and Siamese Network models for vehicle identification and recognition.
- Connected AI models with Firebase and application data; achieved Second Prize – AI Track at UTH 2025.

Additional Information

Soft Skills	Analytical thinking | Problem-solving | Communication | Teamwork | Fast learner, detail-oriented
AI Interests	Generative AI | Agentic AI | LLM Applications | AI Workflow Automation | Business Analytics
English	Technical document reading and basic professional communication
Availability	Available for full-time AI / Data opportunities and eager to grow into a Product Analyst / Manager path.
