Career Objective

Final-year Information Technology student with a strong foundation in office applications, data processing, and software systems. Experienced in using Microsoft Office, SQL, Power BI, and Python for data processing, workflow automation, and reporting. Seeking to contribute to a professional working environment by supporting office operations, data entry, document processing, reporting, software support, and cross-department coordination.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – Expected 10/2026

Bachelor of Information Technology

- GPA: 3.4 / 4.0
- **Academic Excellence Scholarship** – Semester 1, 2025
- **Second Prize – AI Track** – UTH Student Scientific Research Conference 2025

Skills

Office Applications	Proficient in Microsoft Word, Excel, and PowerPoint; document preparation, spreadsheet processing, data consolidation, and report preparation
Data Processing	Excel, SQL, PostgreSQL, SQL Server, Power BI; data entry, data validation, consolidation, and analysis
Systems & Software	Windows, software installation and configuration, basic troubleshooting, service monitoring, and user support
Automation	Python scripting, data processing, and automation of repetitive tasks
Tools	Git, Docker, Postman, VS Code, Power BI, Jira, Confluence
User Support	Guiding users in software usage, handling requests, troubleshooting issues, and coordinating with relevant departments
English	Technical document reading and basic professional communication

Work Experience

Gotik Consulting – Data Engineer

03/2026 – 05/2026

Python | Excel/Power BI | PostgreSQL | Airflow

- Collected, validated, and processed business data from the Odoo system for reporting and analysis.
- Used Python and SQL to clean, process, and consolidate data from multiple sources.
- Developed reports and dashboards using Power BI to monitor operational performance.
- Automated recurring data processing tasks, reducing manual work and supporting regular reporting.
- Worked with PostgreSQL databases and collaborated on data and system-related issues.

Selected Projects

Fall Detection – Real-Time Fall Detection System

03/2026 – 05/2026

Python | FastAPI | YOLOv8 Pose | MediaPipe | Transformer

- Developed a software system for real-time camera data processing and dangerous behavior detection.
- Developed APIs and integrated data processing, AI, and alerting components.
- Achieved 97.8% Mean Accuracy and integrated a Mobile App and Web Admin for monitoring and alerts.
- GitHub: github.com/hohuynhnhu/Fall-Detection

VehicleScan – Smart Parking System

03/2025 – 03/2026

Python | YOLO | CNN | Firebase

- Collected, validated, and managed datasets for system development.
- Developed and integrated AI models, APIs, databases, and application components.
- Won **Second Prize – AI Track** at the UTH Student Scientific Research Conference 2025.
- GitHub: github.com/LeKhang-cn22h/VehicleScanner.git

Additional Information

Soft Skills	Attention to detail | Responsibility | Problem solving | Willingness to learn | Proactive working attitude
Work Style	Able to work independently and collaboratively, handle requests, and complete tasks within deadlines
Availability	Available for full-time employment and flexible working arrangements based on job requirements
