Career Objective

Final-year Information Technology student with a strong foundation in data structures & algorithms, pursuing a Data Engineer role. Hands-on experience designing end-to-end data pipelines (source systems to target repositories) with Python, SQL, dbt, PostgreSQL, and Apache Airflow, plus event-based/streaming ingestion with Kafka, Python data-processing scripts, Power BI dashboards, and low-code workflows with Power Apps. Eager to learn Azure Databricks and PySpark while building reliable, high-quality, and scalable data solutions.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: **3.4 / 4.0**
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

Data Engineering	ETL/ELT, Data Pipeline, Data Ingestion, Data Quality & Consistency, Data Transformation, Workflow Automation & Scheduling
Programming	Python, SQL, Pandas, NumPy, Data Structures & Algorithms
Databases	PostgreSQL, SQL Server, MySQL, MongoDB, Firebase, Supabase, Neon PostgreSQL
Data Tools / BI	dbt, Apache Airflow, Power BI
Streaming & Infrastructure	Apache Kafka, RabbitMQ, MinIO (Data Lake), Docker
Backend / API	FastAPI, RESTful API, Node.js
Tools	Git, Postman, VS Code, Jira, Confluence

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Designed and implemented an end-to-end data pipeline taking Odoo business data from source systems to Neon PostgreSQL, ensuring data quality and consistency through cleaning and validation at every stage.
- Wrote Python scripts and ETL pipelines to extract, clean, transform, and load data according to the needs of analysts and other engineers.
- Developed dbt models to turn raw data into structured, reusable analytical datasets, making transformation logic easier to maintain and extend.
- Automated hourly data workflows with Apache Airflow, including task scheduling, dependency management, and monitoring of ETL runs.
- Built Power BI dashboards to visualize operational and business metrics, delivering interactive reports that meet end-user requirements.
- Wrote SQL queries for aggregation, filtering, joins, and analytical reporting, providing reliable data sources for downstream dashboards.

Featured Data Projects

Delivery Driver – Order Management & Data Analytics System

Python | PostgreSQL | Kafka | MinIO | RFM | Association Rule Mining

12/2025 – 02/2026

- Built an automated, event-based data pipeline with Kafka, a MinIO Data Lake, and a PostgreSQL Data Warehouse to ingest and process order data in real time.
- Applied RFM and Association Rule Mining (Python) to analyze customer orders and frequent pickup–delivery location pairs.
- Generated location-based insights to support recommendations for opening new post offices or service locations.
- GitHub: BE-delivery-driver

VehicleScan – Smart Parking Data System

Python | PostgreSQL | Firebase | ESP32 | Kafka

03/2025 – 03/2026

- Designed streaming data workflows that ingest and process vehicle and IoT sensor data via Kafka.
- Integrated AI models, sensor, and application data into a pipeline for real-time parking management.
- Wrote Python processing scripts and managed PostgreSQL/Firebase storage for data collection and processing.
- GitHub: VehicleScanner

Additional Information

English	Technical document reading and basic professional communication
Working Style	Independent, proactive, detail-oriented; quick to learn and apply new technologies.
Availability	Available for full-time Data Engineer opportunities.
