Ho Huynh Nhu

Data Analyst

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year Information Technology student pursuing a career in Data Analysis, with hands-on experience in SQL, Python, data processing, ETL, and Power BI. Experienced in cleaning and transforming operational data, building analytical datasets, developing dashboards, and analyzing data to identify trends and operational insights. Seeking a Data Analyst position to apply analytical skills to real-world business problems and support data-driven decision-making.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: **3.4 / 4.0**
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

Data Analysis	Data Cleaning, Data Transformation, Data Validation, Exploratory Data Analysis, KPI Analysis, Trend Analysis
SQL	SQL, PostgreSQL, SQL Server, MySQL, Joins, CTEs, Aggregations, Subqueries, Window Functions
BI / Visualization	Power BI, DAX, Dashboard Development, Data Visualization, Operational Reporting
Excel	Excel, Data Cleaning, Data Filtering, Pivot Tables, Lookup Functions, Reporting
Python	Python, Pandas, NumPy, Matplotlib, Data Processing, Data Analysis Automation
ETL / Data	ETL/ELT, dbt, Apache Airflow, Data Pipeline, Data Modeling, Data Warehouse
Databases	PostgreSQL, SQL Server, MySQL, MongoDB, Firebase, Supabase, Neon PostgreSQL
Tools	Git, Docker, Postman, VS Code, Jira, Confluence

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Processed and transformed Odoo business data using Python and SQL to prepare clean and structured datasets for analytics and reporting.
- Built Python-based ETL pipelines to extract data from source systems, perform data cleaning and transformation, and load processed data into Neon PostgreSQL.
- Developed dbt models to transform raw data into structured analytical datasets, improving data consistency and making datasets easier to maintain and reuse.
- Designed and automated hourly data workflows with Apache Airflow, including task scheduling, dependency management, and monitoring of ETL processes.
- Built Power BI dashboards to visualize operational and business metrics, providing interactive reports for monitoring performance and supporting data-driven analysis.
- Wrote SQL queries for data aggregation, filtering, joins, and analytical reporting, ensuring reliable data sources for downstream dashboards and business analysis.

Featured Data Projects

Delivery Driver – Order Analytics System

Python | SQL | Kafka | PostgreSQL | Power BI

12/2025 – 02/2026

- Built an automated data pipeline with Data Lake and Data Warehouse to collect, process, and prepare order data for analysis.
- Applied RFM and Association Rule Mining to analyze customer behavior and identify frequent pickup–delivery location patterns.
- GitHub: BE-delivery-driver

VehicleScan – Smart Parking Data System

Python | SQL | PostgreSQL | Firebase | ESP32

03/2025 – 03/2026

- Collected and processed vehicle and IoT sensor data using Python and SQL for real-time parking management.
- Integrated AI, sensor, and application data into a centralized system to support monitoring and data analysis.
- GitHub: VehicleScanner

Additional Information

English	Technical document reading and basic professional communication
Availability	Available for full-time Data Engineer opportunities.
