Ho Huynh Nhu

Software Developer

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year Information Technology student seeking a Software Developer position, with hands-on experience in Python, TypeScript/JavaScript, and Kotlin, building backend services and RESTful APIs (FastAPI, Node.js, NestJS), event-driven systems with Kafka and RabbitMQ, and database-driven applications. Experienced in team projects using Git, Docker, Jira, and Confluence, and in integrating AI models into full applications. Eager to write clean, maintainable code and grow as a developer.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: 3.4 / 4.0
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

Programming	Python, TypeScript, JavaScript, Kotlin, SQL
Backend / API	FastAPI, Node.js, NestJS, RESTful API, Microservices, Postman
Messaging / Architecture	Apache Kafka, RabbitMQ, Event-driven Architecture, MinIO
Databases	PostgreSQL, SQL Server, MySQL, MongoDB, Firebase, Supabase
Frontend / Mobile	Next.js, Kotlin (Android)
AI Integration	PyTorch, YOLO, Transformer, LLMs, RAG
Data / Automation	ETL/ELT, dbt, Apache Airflow, Power BI
DevOps / Tools	Git, Docker, Jira, Confluence, VS Code

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Wrote Python scripts and ETL pipelines to extract, clean, transform, and load Odoo business data into Neon PostgreSQL.
- Developed dbt models and SQL queries to turn raw data into structured, reusable datasets that are easy to maintain.
- Automated hourly workflows with Apache Airflow, including task scheduling, dependency management, and monitoring of runs.
- Built Power BI dashboards for operational monitoring and data-driven insights.

Featured Projects

Fall Detection – Real-Time AI Fall Detection System

Python | YOLOv8 Pose | MediaPipe | Transformer | FastAPI

04/2026 – 06/2026

- Developed a real-time fall detection system using YOLOv8 Pose, MediaPipe, and Transformer.
- Trained a Transformer Encoder with 30-frame × 200-feature input for fall/non-fall classification.
- Achieved 97.8% mean accuracy with 5-fold cross-validation and integrated FastAPI for real-time alerts.
- GitHub: Fall-Detection

VehicleScan – Smart Parking System with AI & IoT

Python | YOLO | CNN | Siamese Network | ESP32

03/2025 – 03/2026

- Developed vehicle detection and recognition models using YOLO, CNN, and Siamese Network.
- Prepared datasets and trained AI models for real-time vehicle identification.
- Integrated AI models with ESP32 and Firebase; won Second Prize – AI Track at UTH 2025.
- GitHub: VehicleScanner

Delivery Driver – Order Management & Data Analytics System

Python | PostgreSQL | Kafka | MinIO | RFM | Association Rule Mining

12/2025 – 02/2026

- Built an automated, event-based data pipeline with Kafka, a MinIO Data Lake, and a PostgreSQL Data Warehouse to ingest and process order data in real time.
- Applied RFM and Association Rule Mining (Python) to analyze customer orders and frequent pickup–delivery location pairs.
- Generated location-based insights to support recommendations for opening new post offices or service locations.
- GitHub: BE-delivery-driver
