Ho Huynh Nhu

Industrial Engineering (IE) Staff

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year Information Technology student seeking an IE Staff position in the garment industry. Experienced in collecting and analyzing data, tracking operational metrics, recording incidents and their causes, preparing quick reports with Excel and Power BI, and analyzing video with AI. A fast learner who adapts well to new environments, eager to learn and apply IE methods such as operation time study, line balancing, and productivity improvement.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: **3.4 / 4.0**
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Skills

Office Computing	Excel (Pivot Table, Lookup Functions, Charts, Data Filtering & Summarizing), Power BI, Regular Reporting
Data Collection & Analysis	Data Collection, Data Cleaning & Validation, Trend Analysis, KPI Analysis, Root-cause Investigation, Data Visualization
Monitoring & Incident Handling	Real-time Metric Tracking, Anomaly Detection, Error Logging & Resolution, Quick Reporting
Video / Image Analysis	YOLO, MediaPipe, CNN, Video Processing, Image Preprocessing
Programming & Data	Python, Pandas, NumPy, SQL, PostgreSQL, ETL, Apache Airflow
Tools	Jira, Confluence, Git, Docker, Postman, VS Code

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Monitored hourly ETL workflows on Apache Airflow: logged failures, investigated causes, and resolved them to keep the system running continuously and minimize interruption time.
- Built Power BI dashboards to track operational metrics and prepared regular reports to help management make data-driven decisions.
- Wrote SQL queries to aggregate, filter, and join data, ensuring reliable figures for reports.
- Processed, checked, and standardized Odoo business data to detect discrepancies and prepare accurate datasets for analysis.

Featured Projects

VehicleScan – Vehicle Recognition & Monitoring System

Python | YOLO | CNN | Siamese Network | ESP32 | Kafka

03/2025 – 03/2026

- Built an AI-based vehicle recognition system combined with IoT sensors (ESP32) to monitor parking in real time.
- Processed image and sensor data and integrated it into one centralized system to track operating status and support reporting.
- GitHub: VehicleScanner

Fall Detection – Video Analysis System for Fall Detection

Python | PyTorch | YOLOv8 Pose | MediaPipe | Transformer

04/2026 – 06/2026

- Analyzed video to extract human pose using MediaPipe and YOLOv8 Pose and detect fall incidents.
- Achieved 97.8% mean accuracy with 5-fold cross-validation and tested on unseen data.

Delivery Driver – Order Analytics System

Python | SQL | Kafka | PostgreSQL | MinIO

12/2025 – 02/2026

- Built an automated data pipeline to collect and process order data for analysis.
- Applied RFM and Association Rule Mining to analyze customer behavior, generating insights to support service-point optimization.
- GitHub: BE-delivery-driver

Additional Information

Soft Skills	Fast learner, adaptable | Meticulous, responsible | Teamwork | Quick, clear reporting
English	Technical document reading and basic communication
Availability	Available for full-time IE Staff opportunities.
