Career Objective

Final-year Information Technology student seeking a QA position, with a basic understanding of software testing and hands-on experience in SQL, Python, API testing using Postman, and Jira. Detail-oriented and logical, with experience validating data, identifying errors, and reporting results clearly. Eager to learn software testing processes, improve testing skills, and contribute to delivering reliable software products.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: **3.4 / 4.0**
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

Software Testing	Manual Testing (Web/Mobile), Test Case & Test Checklist, Bug/Defect Reporting, Data Validation
Bug Tracking & Collaboration	Jira, Confluence, Git, Daily/Weekly Progress Reporting
API / Database	Postman, RESTful API, SQL, PostgreSQL, SQL Server, MySQL, Joins, Aggregations, MongoDB, Firebase
Generative AI	LLMs, Retrieval-Augmented Generation (RAG), AI-assisted Analysis
Programming	Python, Pandas, NumPy, FastAPI, TypeScript, JavaScript, Kotlin
Data / BI	Power BI, Excel, ETL/ELT, dbt, Apache Airflow, Docker
English	TOEIC 500; reading technical documents, writing bug reports and basic communication

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow | Power BI

03/2026 – 05/2026

- Wrote SQL queries to aggregate, filter, and join data, and cross-checked results to ensure reliable data sources for dashboards and reports.
- Cleaned and validated Odoo business data with Python and SQL to detect inconsistencies and prepare accurate, structured datasets.
- Monitored scheduled Airflow workflows (hourly ETL runs), tracking task dependencies and failures to keep data pipelines stable.
- Developed dbt models to standardize raw data, improving data consistency and making results easier to verify and reuse.
- Built Power BI dashboards and regular reports on operational metrics for monitoring and review.

Featured Projects

Fall Detection – Machine Learning Classification System

Python | PyTorch | YOLOv8 Pose | MediaPipe | Transformer

04/2026 – 06/2026

- Prepared video datasets and extracted human pose features using MediaPipe and YOLOv8 Pose for fall/non-fall classification.
- Developed and trained a Transformer Encoder for binary classification using sequential pose features.
- Achieved 97.8% mean accuracy with 5-fold cross-validation and evaluated model performance on unseen data.

VehicleScan – AI-Based Vehicle Recognition System

Python | YOLO | CNN | Siamese Network | Firebase

03/2025 – 03/2026

- Prepared and labeled datasets for vehicle detection, classification, and recognition tasks.
- Trained and evaluated YOLO, CNN, and Siamese Network models for vehicle identification and recognition.
- Applied image preprocessing and feature extraction, and achieved Second Prize – AI Track at UTH 2025.
