Ho Huynh Nhu

Software Tester (QA)

20/10/2003 | (+84) 367 503 477 | hhnhu2003@gmail.com | Ho Chi Minh City

github.com/hohuynhnhu | facebook.com/huynhnhu.ho.961

Career Objective

Final-year IT student with programming, SDLC, and database fundamentals, plus hands-on practice testing AI/ML models and FastAPI systems (test case design, functional/integration testing, cross-validation, bug tracking). Upper-intermediate English, strong passion for technology, and eager to build a solid QA foundation through a mentorship-driven program such as NAB WeCamp.

Education

University of Transport Ho Chi Minh City (UTH)

10/2022 – 10/2026

Bachelor of Information Technology – Completed coursework

- GPA: 3.4 / 4.0
- **Excellent Scholarship** – Semester 1, 2025
- **Second Prize – AI Track**, UTH Student Scientific Research Conference 2025

Technical Skills

AI / Model Testing	Model Evaluation, Accuracy/Precision/Recall/F1 Analysis, K-Fold Cross-Validation, Error Analysis, Regression Testing of Model Versions
Functional & API Testing	Manual Testing, Test Case Design, API Testing (Postman), Integration Testing, End-to-End Testing of FastAPI Services
Computer Vision & AI Dev	Object Detection, Pose Estimation, Face Recognition, MediaPipe; built with Python, PyTorch, OpenCV, Ultralytics YOLO, FastAPI
Data & Reporting	PostgreSQL, SQL Server, MongoDB, Firebase, Supabase, dbt, Airflow, Power BI
Tools	Git, Docker, Postman, VS Code, Jira/bug tracking, Power BI
Programming	Python, SQL, TypeScript, JavaScript, Kotlin
English	Upper-Intermediate – clear written and spoken communication for technical/professional contexts

Work Experience

Gotik Consulting – Data Engineer

Python | dbt | PostgreSQL | Airflow

03/2026 – 05/2026

- Validated and reconciled Odoo data outputs against source records; developed and tested Python pipelines with dbt and Neon PostgreSQL, including data-quality checks.
- Monitored and verified automated Airflow workflows, investigating and resolving failed runs; built Power BI dashboards to cross-check operational metrics.

Featured AI Testing / Evaluation Projects

Fall Detection – Real-Time AI Fall Detection System

Python | YOLOv8 Pose | MediaPipe | Transformer | FastAPI

04/2026 – 06/2026

- Designed and executed the evaluation plan for a real-time fall detection model (YOLOv8 Pose + MediaPipe + Transformer), covering offline model testing and live system testing.
- Ran 5-fold cross-validation (Transformer Encoder, 30-frame × 200-feature input), achieving 97.8% mean accuracy.
- Tested the FastAPI real-time alert pipeline end-to-end to confirm detection latency and correctness.
- GitHub: Fall-Detection

VehicleScan – Smart Parking System with AI & IoT

Python | YOLO | CNN | Siamese Network | ESP32

03/2025 – 03/2026

- Tested vehicle detection/recognition models (YOLO, CNN, Siamese Network) against labeled datasets to measure and improve recognition accuracy.
- Performed integration testing between AI models, ESP32 hardware, and Firebase; reported and helped fix edge-case failures. Won Second Prize – AI Track, UTH 2025.
- GitHub: VehicleScanner

Additional Information

Soft Skills	Attention to detail | Analytical / root-cause thinking | Teamwork | Troubleshooting
QA Interests	AI/ML Model Evaluation | API & System Testing | Test Automation | QA for Real-time Systems
Availability	Final-year student / career switcher into QA – available to join NAB WeCamp full-time.
