Lê Tuấn Khang

Mobile Developer Intern

DOB: 15/03/2004 | 0332174585 | khang.letuan04@gmail.com | Ho Chi Minh City

github.com/LeKhang-cn22h | linkedin.com/in/tuan-khang-le

OBJECTIVE

Motivated IT student seeking a **Mobile App Developer Intern** position. Passionate about building cross-platform Flutter applications, integrating RESTful APIs, and implementing native Android features. Eager to contribute to real-world projects and grow within a professional development team.

EDUCATION

University of Transport Ho Chi Minh City

10/2022 – Expected 10/2026

Bachelor of Information Technology

- GPA: 3.4 / 4.0 | Academic Excellence Scholarship, 2025
- 2nd Prize – UTH Student Scientific Research Conference 2025 (AI Track)

TECHNICAL SKILLS

Mobile	Flutter (MVVM, GoRouter, SharedPreferences, Provider, FCM), Kotlin (Jetpack Compose, Hilt, Retrofit)
Backend	NestJS, NodeJS, TypeScript, FastAPI, RESTful APIs
Database	Supabase, Firebase (Realtime DB, FCM), MongoDB, SQL Server, Qdrant, Cloudinary
AI / ML	CNN (license plate recognition), Siamese Network (identity verification)
Languages	Dart, Kotlin, Python, Java, TypeScript, JavaScript
Tools	Git, Android Studio, Figma, Postman, VS Code
Soft Skills	Teamwork | Communication | Problem Solving | Eagerness to Learn | Adaptability under Pressure

PROJECTS

BarberGo – Barber Booking Application

Flutter | FastAPI | Supabase | FCM

Team size: 2 | Role: Team Leader | Nov 2025 – Mar 2026

- Designed UI/UX in Figma; independently developed 90% of the app covering all core mobile features.
- Implemented JWT auth with persistent login (SharedPreferences), booking flow, profile management, and history.
- Applied MVVM integrated REST APIs via Dio, and OpenStreetMap for location-based barber discovery.
- Integrated FCM for real-time push notifications to customers and shop owners.
- Built an AI chatbot using RAG with Ollama LLM and Supabase vector database.
- Teammate handled AI features: hairstyle generation and facial acne analysis with style recommendations.
- Frontend Code | Backend Code

VehicleScan – IoT & AI Smart Parking System

Python | Kotlin | ESP32 | Firebase

Team size: 5 | Role: Team Leader | Mar 2025 – Mar 2026

- Led a team of 5 to build a smart parking & vehicle security system integrating mobile, AI, and IoT over 12 months.
- Developed Android (Kotlin) features: real-time vehicle alerts, QR-based gate access, and entry/exit history.
- Integrated Firebase Realtime Database for live sync between mobile app, AI modules, and ESP32 gate devices.
- Applied CNN for license plate recognition and Siamese Network for vehicle identity verification.
- **Awarded 2nd Prize – AI Track**, UTH Scientific Research Conference 2025.
- Frontend Code | Model Code
